

## **Fatman Fabrications Offers Cost Effective Solutions for Customers**

Mint Hill, NC.: Fatman Fabrications has recently announced that the company now offers customers a cost-effective solution to help them save money during the build process. The cost savings can be realized in the purchase of the base core Fatman Fabrications Weld-In-Crossmember Kit and Weld-In-Front Stub Kit.

Fatman Fabrications obtained feedback from their customers and looked at the overall market and decided it was time for a change to better help buyers with cutting overall cost. The company now offers the above-mentioned products as a cost savings base core package kit so the customer can obtain the other suspension items needed to complete the build from market sources that they wish to purchase from.

Fatman Fabrications will be supplying the customers with a list of parts they need to finish the build and potential sources to obtain the required items from. According to the company, this will provide the customer with the opportunity to purchase the remaining items as their budget allows versus spending all at once.
